### 1. Set PLC IP address.

The screenshot displays the 'Module Properties' dialog box for 'Controller:1 (1769-L23E-QB1 Ethernet Port 18.11)'. The 'General' tab is selected, showing the following details:

- Type: 1769-L23E-QB1 Ethernet Port 10/100 Mbps Ethernet Port on CompactLogix5323E-QB1
- Vendor: Allen-Bradley
- Parent: Controller
- Name: LocalENB
- Description: [Empty]
- Slot: 1
- Major Revision: 18

In the 'Address / Host Name' section, the 'IP Address' radio button is selected, and the IP address '192.168.1.130' is entered in the adjacent text box. The 'Host Name' radio button is unselected.

The 'Status' is 'Offline'. At the bottom, there are buttons for 'OK', 'Cancel', 'Apply', and 'Help'. Below the dialog, there are additional status indicators and an 'Advanced...' button.

The background shows the 'Controller Organizer' tree with the following structure:

- Controller AB

Allen-Bradley PLC-5 Family PLCs using the DF1 Full Duplex protocol.

For the PLC-5/10, PLC-5/15 and PLC-5/25 the MT8000 should be connected to:

- the DF1 port on the 1785-KE module;

for the PLC-5/11, PLC-5/20, PLC-5/30 and PLC-5/40 the MT8000 should be connected to:

- the Channel 0 Port on the PLC.

# Memory Map

Memory Map protocol is similar to IBM 3764R communication protocol. The MT8000 reserves 512 words of Data memory for use with this protocol. The MT8000 must update the values in these words. The MT8000 uses the words to display data and control parts status on its screen. When touch actions are taken, data is sent to the other once, and then update the memory in it. The MT8000 is always responsible for updating the Data memory.

## HMI Setting:

Parameters	Recommend	Option	Notes
PLC type	Memory Map		
Com port	RS232	RS232, RS485 4W, 2W	RS232 default
Baud rate	115200	9600~115200

## Device address:

Bit/Word	Device Type	Format	Range	Memo
B	MB	ddd(h)	ddd:0~9999 (h): 0~F	
W	MW	ddd	ddd:0~9999	

The MB and MW are using same area to store data.

MW 0 = MB 000000 ~ MB 0000F

MW 1 = MB 000100 ~ MB 0001F

Fx3u-ENET module setting:

Before using Ethernet module, using GX Developer / FX Configurator-EN to set the Ethernet module, the FX3u-ENET module settings as below steps.

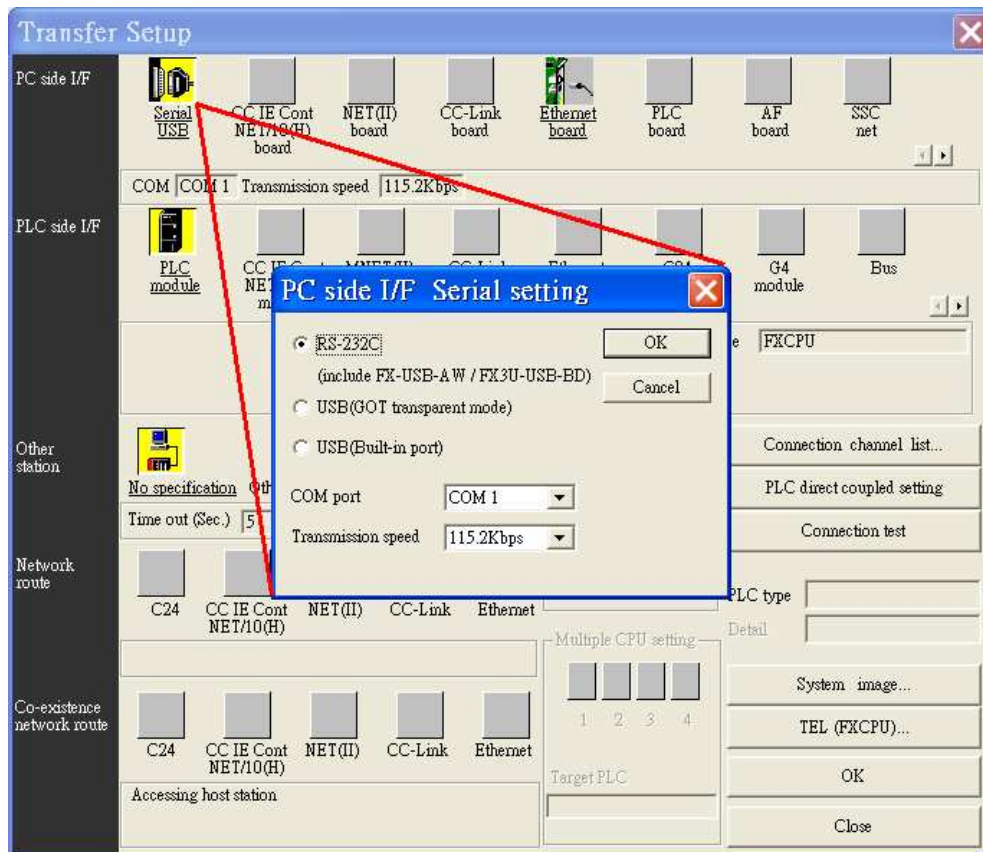

1. Open GX Developer, select “Read from PLC” in Online list.

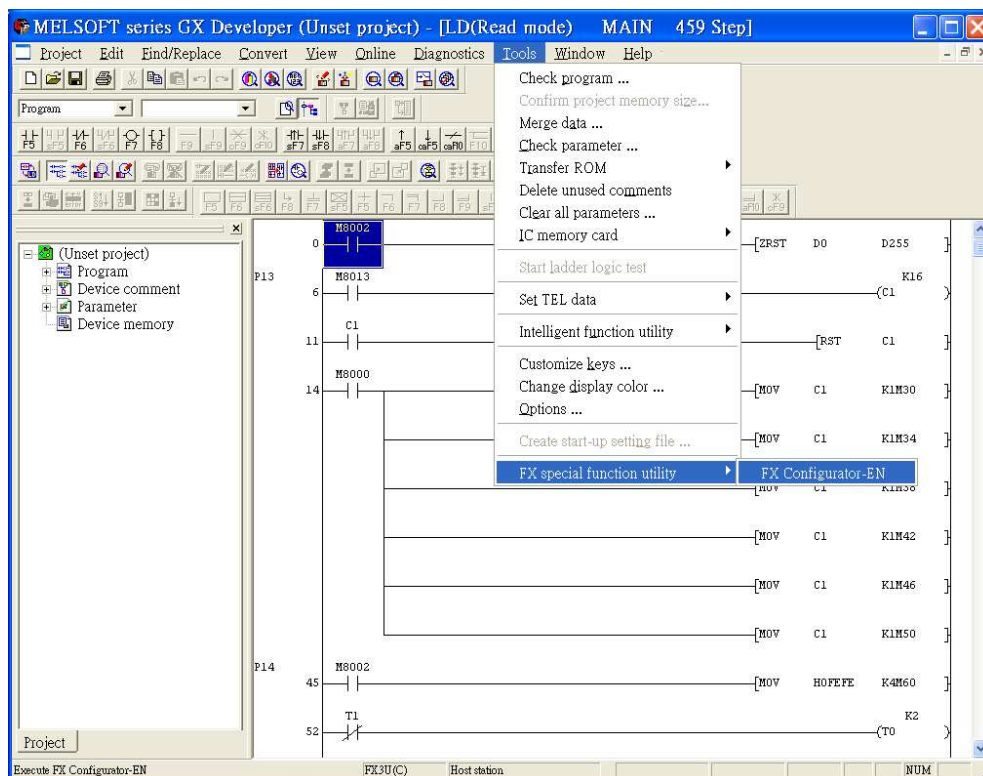

2. Select “FXCPU” in PLC series.

3. Users have to connect PLC via series port for setting IP address at first time.

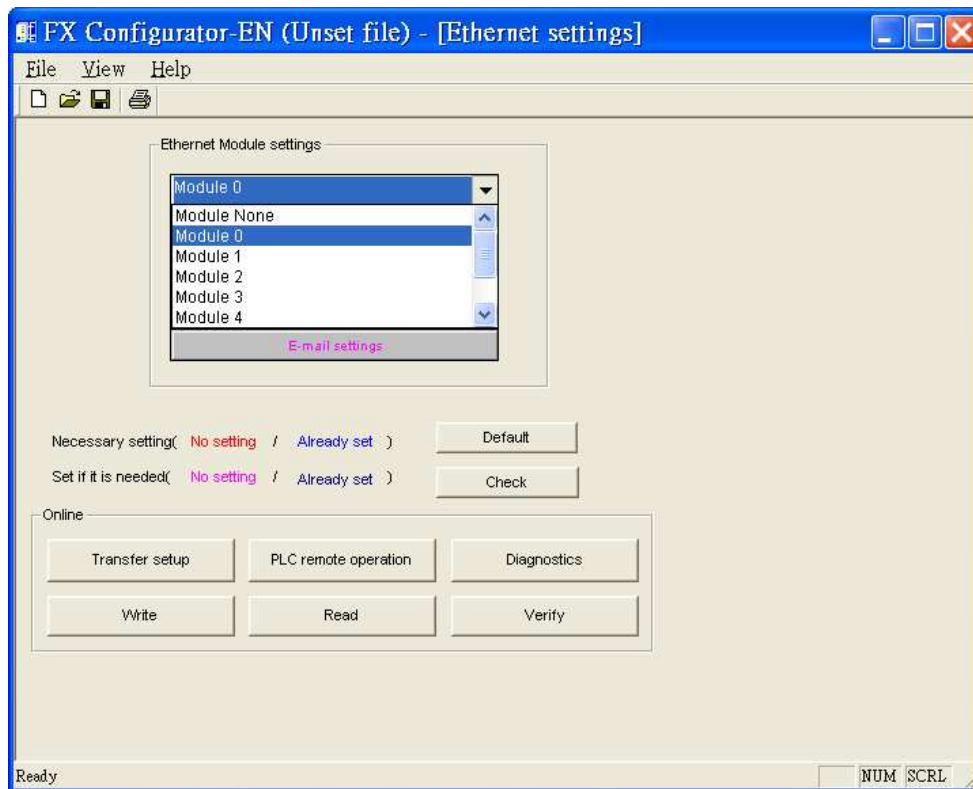

4. After finishing the PLC settings, select Tools/FX special function utility/FX Configurator-EN

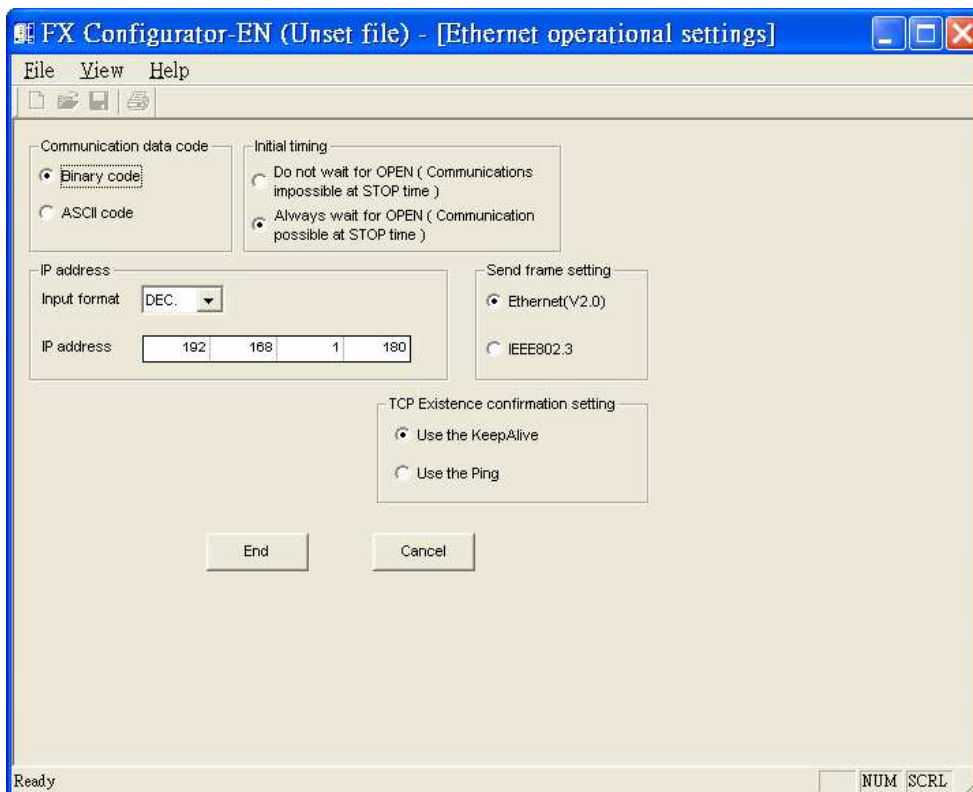

5. Select “Module 0” in Ethernet Module settings.

( If more than one module, please setting modules step by step)

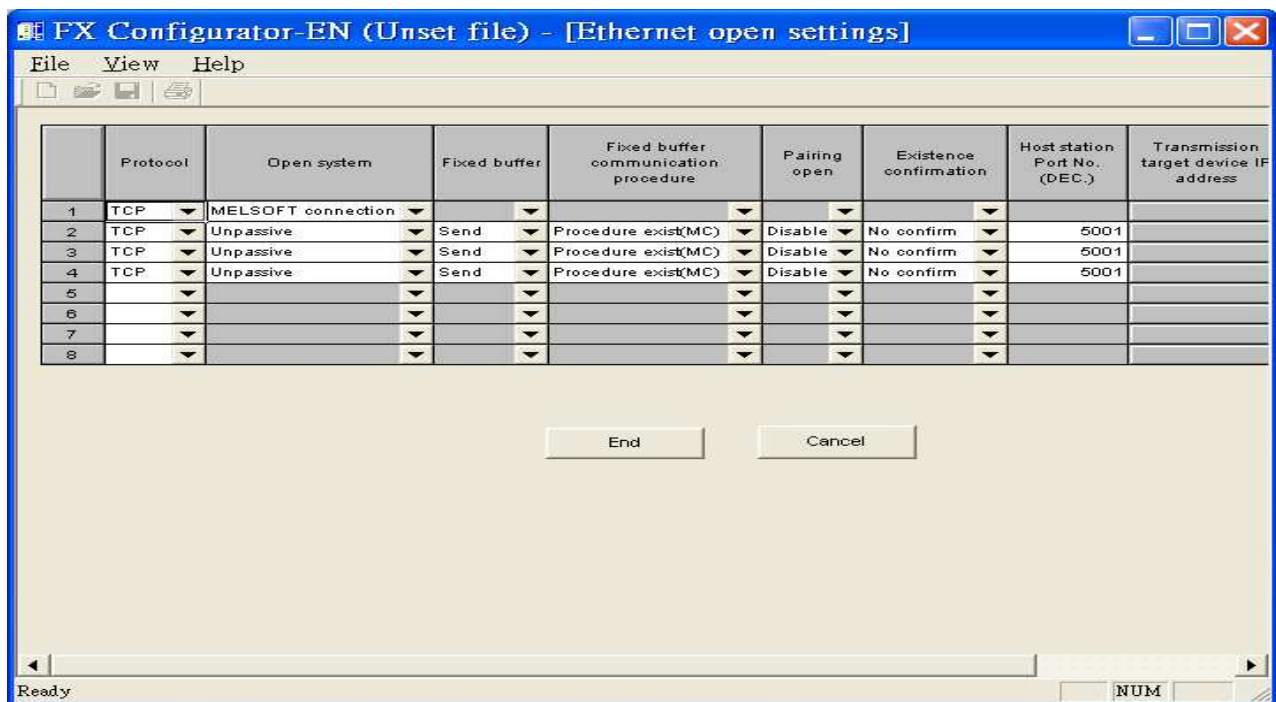

6. In Ethernet operational settings, select the related parameters and IP address and then press "End" to finish the settings.

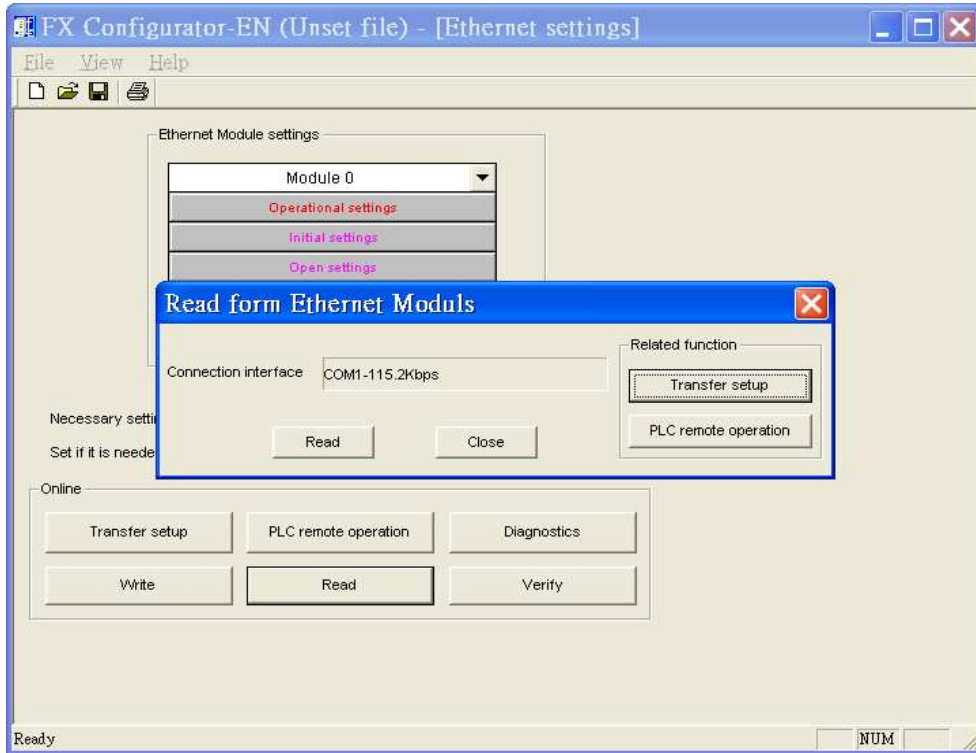

7. In Ethernet open settings, press “End” after setting the below parameters.

## MITSUBISHI Q series Ethernet module setting:

**Remark: If using QJ71E71 module, please refer MITSUBISHI QJ71E71 connection guide.**

1. Click PLC parameter
2. Built-in Ethernet port.
3. Click Open settings and then set the IP address and communication data code
4. Set the MC protocol-TCP Port No.1387 (Hex) and in EB8000 TCP port is 4999 (Dec).

Note: In EB8000, please fill in network no. in Parameter 1 as PLC setting.

For example,

From below picture, the Network no. is 2

Module 1	
Network type	Ethernet
Starting I/O No.	0000
Network No.	2

	Open settings
	Router relay parameter
	Station No.<->IP information
	FTP Parameters
	E-mail settings

Users have to set 2 in Parameter 1 in EB8000.

When using Q02U driver, HMI needs 10 seconds to initial the PLC Q02U driver. Before finishing

initial, we suggest users don't wire data to PLC, or it could cause the "PLC no response"; and if the wiring diagram or the data are incorrect, it could cause PLC locked. If the PLC locked, users have to restart PLC or reinstall PLC module.

## Setting Illustrations:

1. Go to [System Parameter Settings]  , click [New] to add a new device -Modbus

RTU (0x 1x range adjustable) , as shown below:

2. After adding Modbus RTU (0x 1x Range Adjustable) driver, [Add Address Range Limit] button will be enabled as below. Users can set maximum read/write command size here.

- Max.read-command size (words): Pull down to select PLC reading range.

Max. read-command size (words) :

- Max.write-command size (words): Pull down to select PLC writing range.

Max. write-command size (words) :

Note: Setting [Add Address Range Limit] is enabled only when bit address is not a multiple of 16bit.

3. Click [Add Address Range Limit] button, Users can define 0x and 1x address range in [0x 1x Address Range] dialogue box, referring to bit range of the device used.

Add : Set [Station No.], [Device Type], [Max. Address] then click [OK] to finish adding as below:

Delete : The selected items will be deleted.

Settings : Set [Station No.], [Device Type], [Max. Address] then click [OK] to finish adding as below:

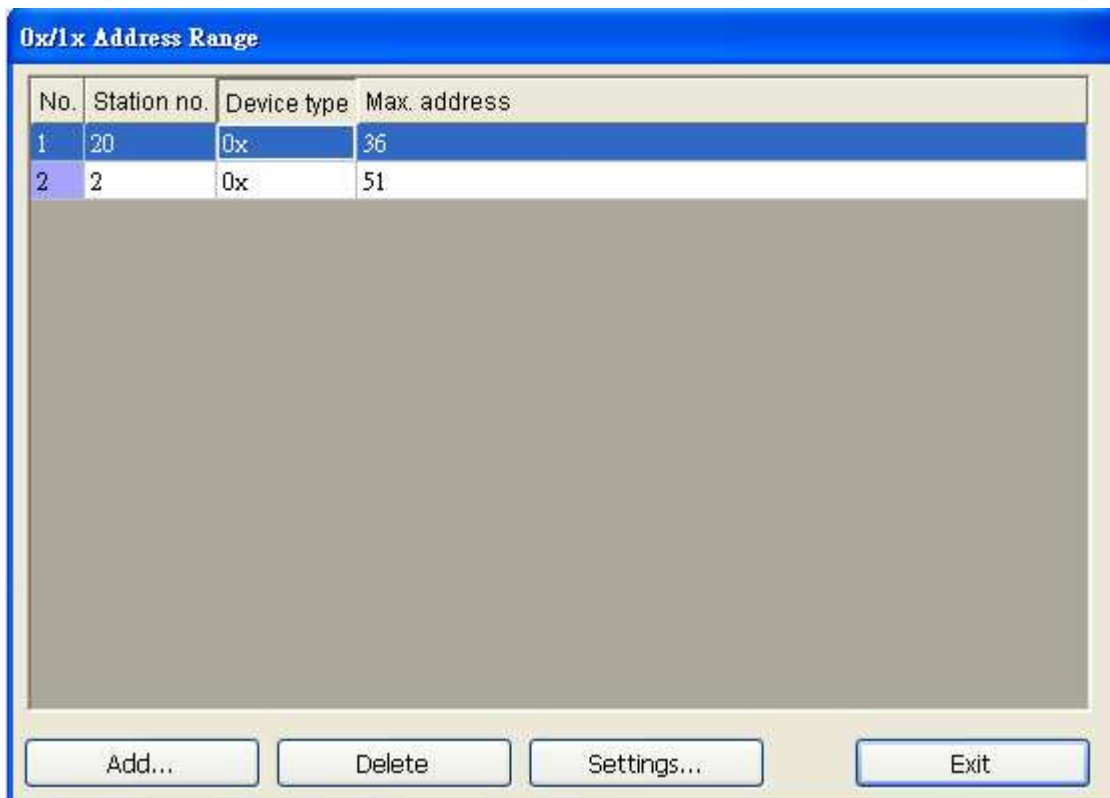

### Example :

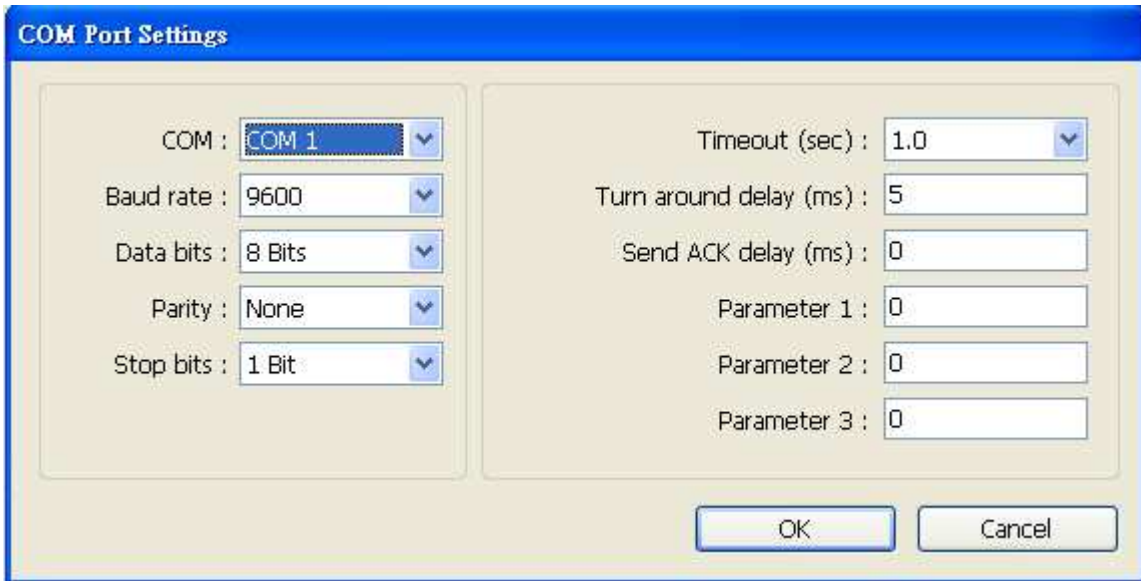

Take D2 and D8 of SCON as example, the settings depend on maximum bit range of different PLC types. Set [Station No.] and address first.

For D2, set [Station No.] to **20**, [Device Type] **0x**, [Max. Address] **36**.

For D8, set [Station No.] to **2**, [Device Type] **0x**, [Max. Address] **51**.

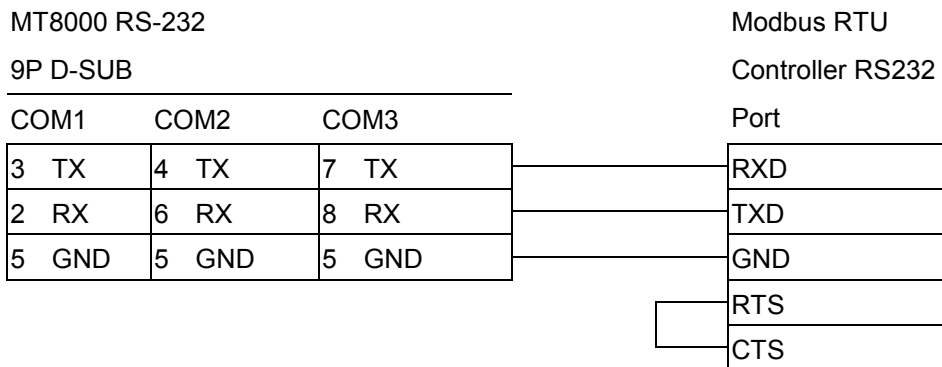

Note: If connecting with 2 or more PLC, click [Settings] in [Device Properties], and set **4** to [Turn around delay] as below.

After completing all settings above, users can now communicate with the devices.

- Command 84, Command 93, Command 94 and Command 9B are write only. (These commands are able to use Set Bit Object and execute the write command after trigger Set Bit Object.). Except these four commands, others are read only.
- Parameter read/write: Use Device type to define address control from 00~7F  
For example: "address\_00" is mapping to "Parameter\_00". (Please refer detail with Panasonic MINAS A4 series user manual.)
- Device address type can define MINAS A4 Driver's command list.  
Command 20, Command 27 and Command 28 are Bit type, use "Operating range" to map communication order status.  
For example: "Command 20\_3" means "Read state\_CCW."  
(Please refer detail with Panasonic MINAS A4 series user manual)
- Command 91 and Command 92 are word type, use "Operating range" to map the record of 14 alarms.  
For example: "Command 91\_1" means "Read alarm data\_First alarm."

How to setting Compax 3 servo to RS485 mode?

1. Open C3 ServoManager2, select "Communication"=> "RS-485 Settings".

2. Click to Configure "RS-485/POP Settings".

3. Setting parameters as below

The diagram shows the RS-485 connection setup. On the left, a blue dashed box contains the TxD, RE, and RxD pins of the PLC. The TxD pin is connected to the A line of the RS-485 bus, and the RxD pin is connected to the B line. The RE pin is connected to the A line. On the right, three yellow boxes represent servos, each with its own A and B lines connected to the bus. Below the diagram is a table titled 'RS-485 Settings'.

Master General	
Multicast Address	98
Device Address	1
Baud rate	9600
Connection Type	Two wire
Parity	No
Stop bits	1

4. Downloading settings to Compax3 Servo.

5. Setting EB8000 system parameter and connecting with PLC for communication of HMI and Servo.

## EB8000 Device Setting Steps

1. Open EB8000, and File -> NEW, select HMI model and press ok button

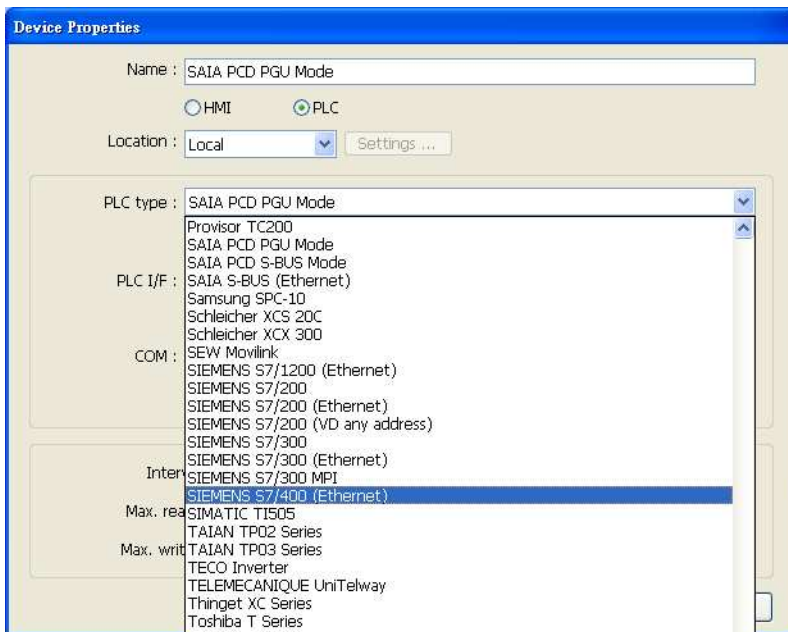

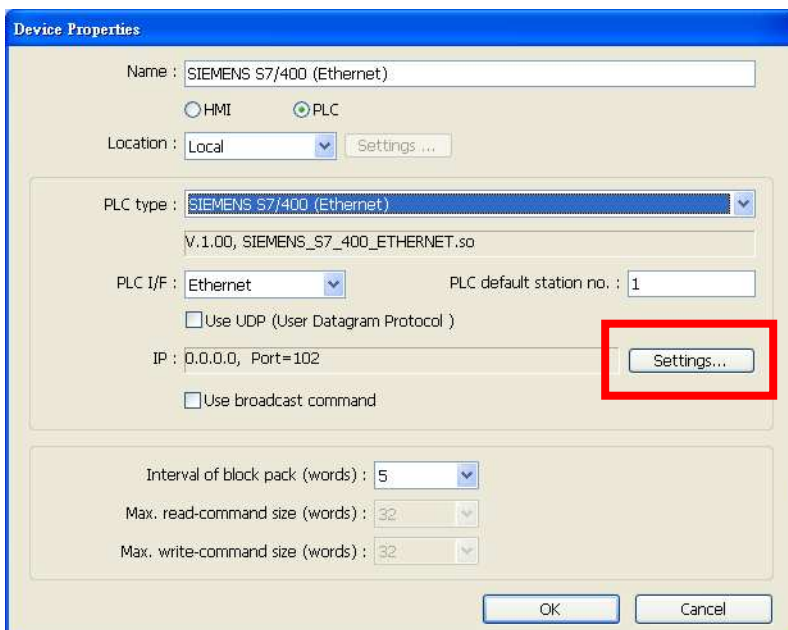

- Then, you will see the window of "system parameter settings" as below, press "New" button.

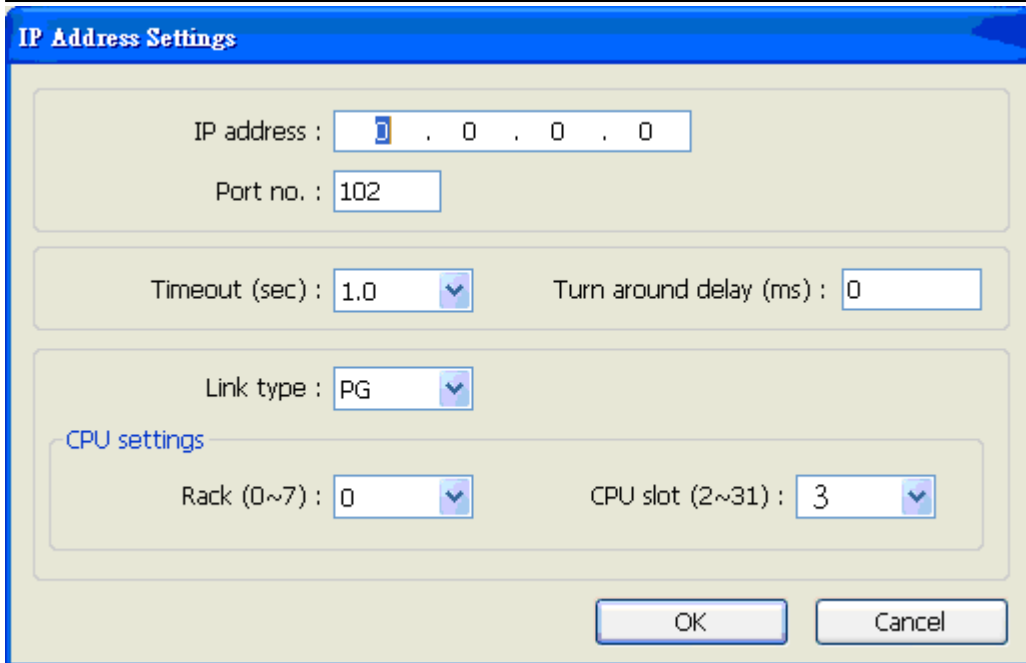

3. Select “SIEMENS S7/400(ETHERNET)” .

4. Press “Settings” button.

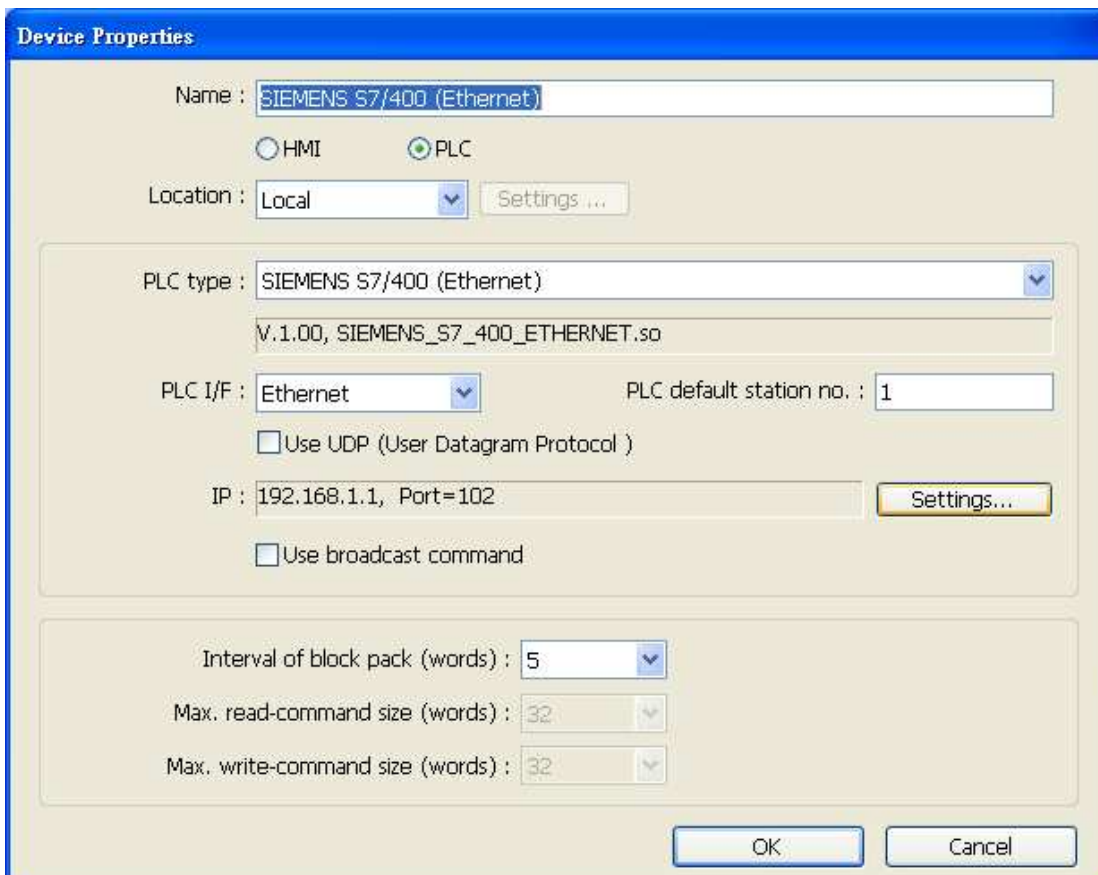

5. Setting S7/400 IP, Port, Link type, Rack and CPU slot.(have to match PLC)

The IP Address Settings dialog box contains the following fields and controls:

- IP address : 1 . 0 . 0 . 0
- Port no. : 102
- Timeout (sec) : 1.0
- Turn around delay (ms) : 0
- Link type : PG
- CPU settings:
  - Rack (0~7) : 0
  - CPU slot (2~31) : 3
- Buttons: OK, Cancel

6. The setting will be finished As below,.

The Device Properties dialog box contains the following fields and controls:

- Name : SIEMENS S7/400 (Ethernet)
- HMI  PLC
- Location : Local
- PLC type : SIEMENS S7/400 (Ethernet)
- v.1.00, SIEMENS\_S7\_400\_ETHERNET.so
- PLC I/F : Ethernet
- PLC default station no. : 1
- Use UDP (User Datagram Protocol )
- IP : 192.168.1.1, Port=102
- Use broadcast command
- Interval of block pack (words) : 5
- Max. read-command size (words) : 32
- Max. write-command size (words) : 32
- Buttons: OK, Cancel

## How to get the WideField communication setting

If you want get the WideField communication setting, select [Tool]->[Set Environment] default is Automatic. Using the Automatic Recognition, Wide Field software will connect the Current PLC and get the PLC communication setting. If you have know the PLC communication configuration, you also can select the Fixed mode ,It will connect the PLC quickly.

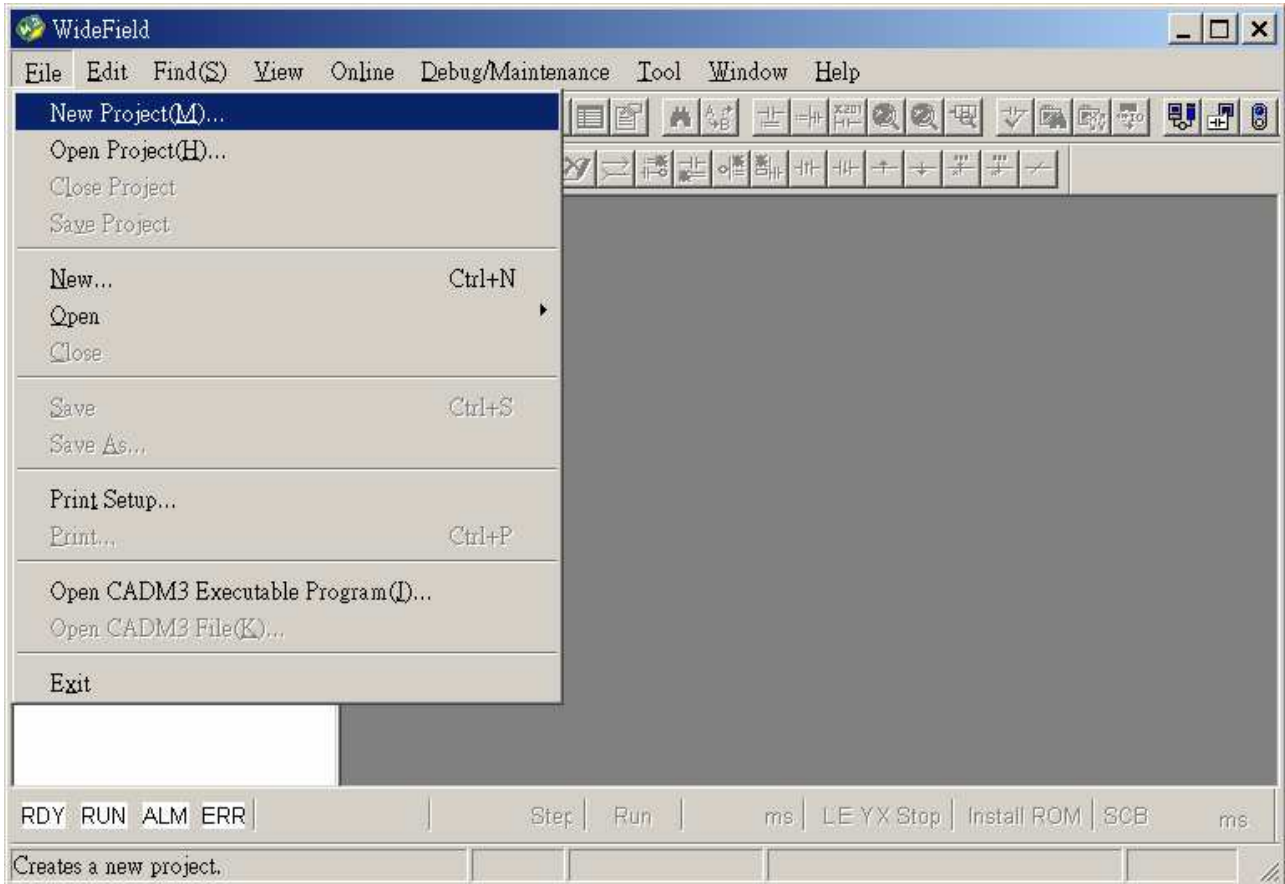

P.S Because use Personal computer link, when you connecting to PLC it will delay about 20sec for test communication.

## How to Setting YOKOGAWA PLC Communcation configuration.

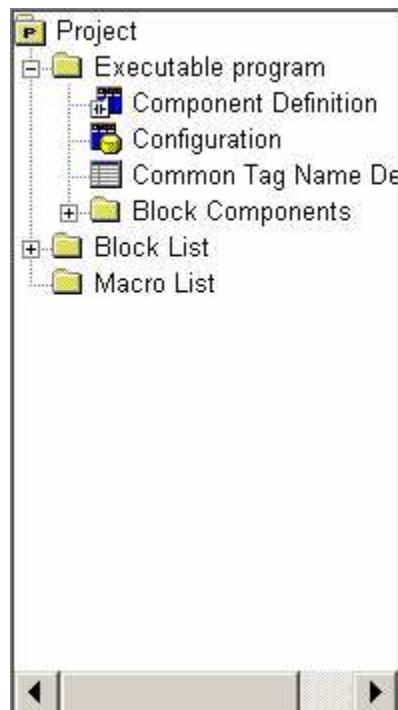

YOKOGAWA FA-M3

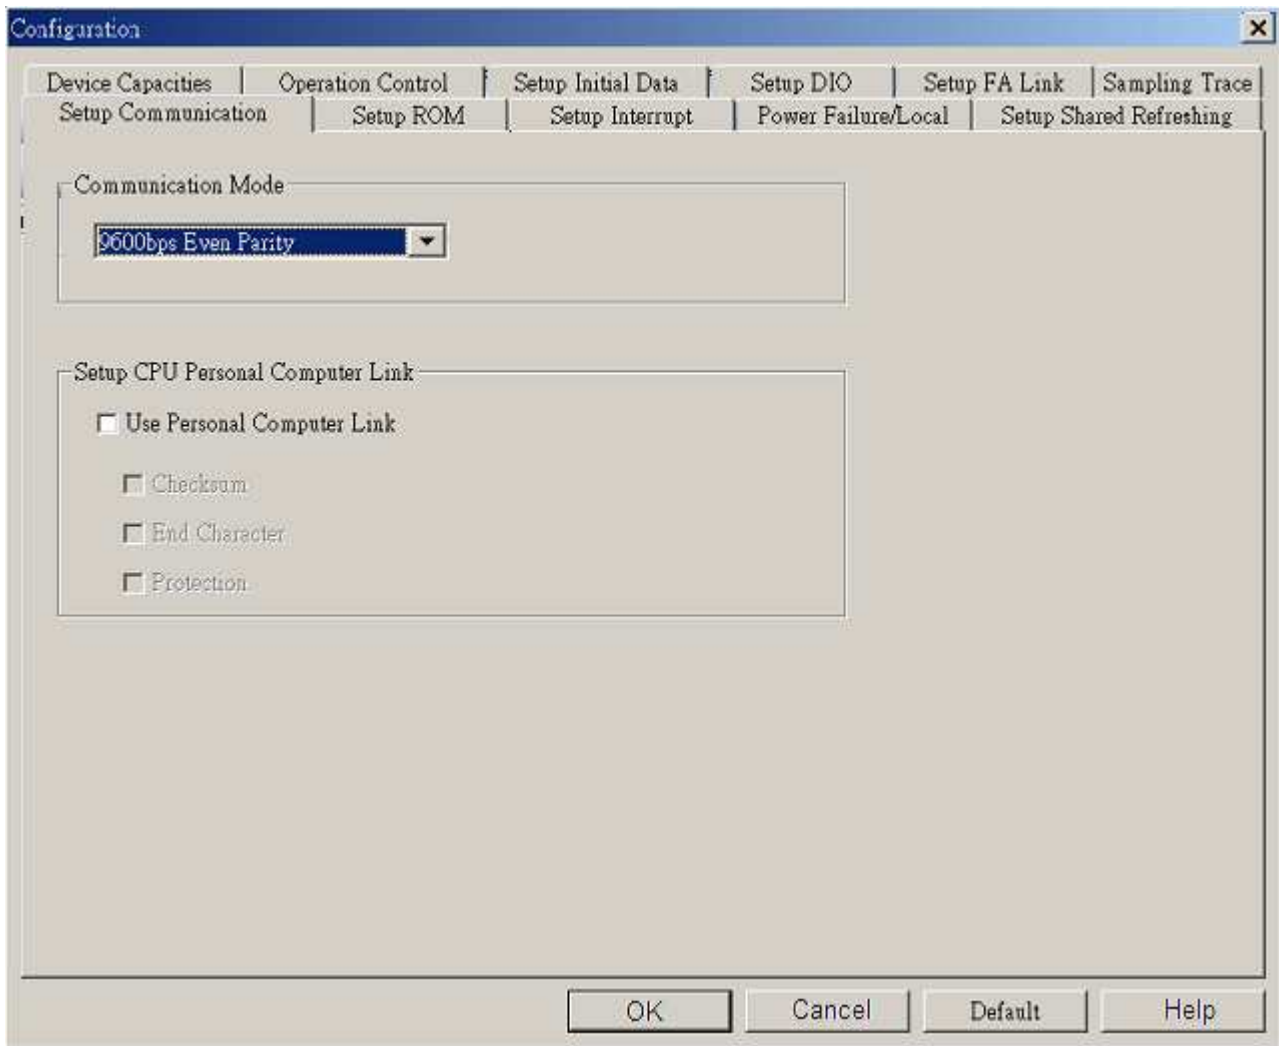

CPU SP55-5N (same SP35-5N)

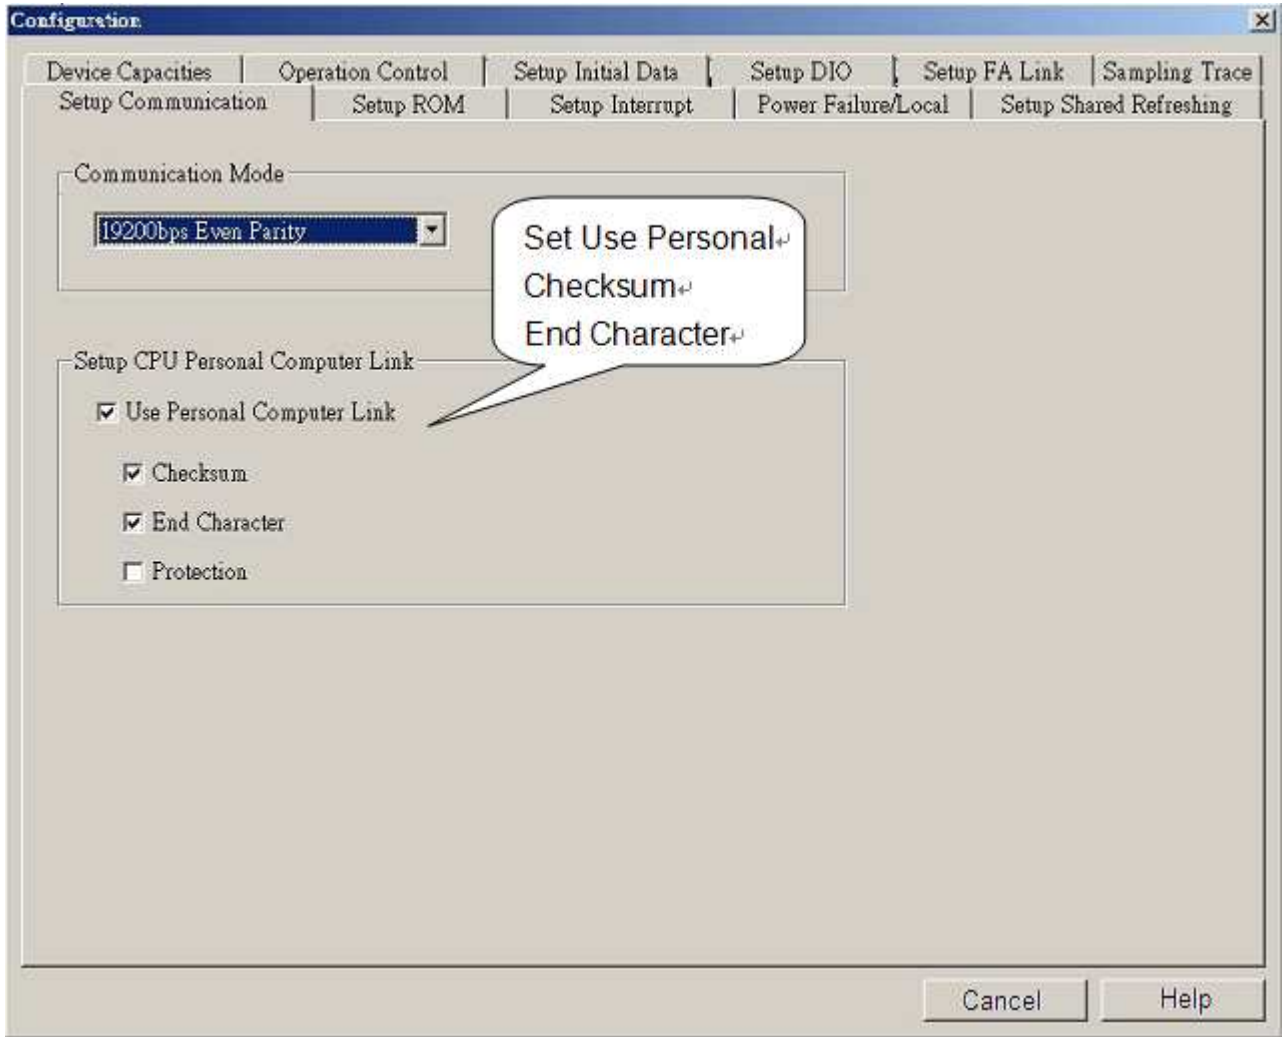

[File]->[New Project] to create a new project

click "Configuration" for setup communication.
